2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a ". " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com

Output: Valid email address

Answer

```
import java.util.Scanner;

class DotException extends Exception {
    public DotException(String message) {
        super(message);
    }
}

class AtTheRateException extends Exception {
    public AtTheRateException(String message) {
        super(message);
    }
}

class DomainException extends Exception {
    public DomainException(String message) {
        super(message);
    }
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String email = sc.nextLine();
        try {
            if (!email.contains("@") || email.indexOf "@" != email.lastIndexOf "@")) {
                throw new AtTheRateException("Invalid @ usage");
            }
            String[] parts = email.split "@";
            String local = parts[0];
            String domain = parts[1];
            if (local.isEmpty() || local.startsWith(".") || local.endsWith(".")) ||
```

```
local.contains(".")) {
    throw new DotException("Invalid Dot usage");
}
if (domain.isEmpty() || domain.startsWith(".") || domain.endsWith(".") || domain.contains("..")) {
    throw new DotException("Invalid Dot usage");
}
if (domain.indexOf(".") == -1 || domain.indexOf(".") != domain.lastIndexOf(".")) {
    throw new DotException("Invalid Dot usage");
}
String[] domainParts = domain.split("\\.");
if (domainParts.length != 2) {
    throw new DotException("Invalid Domain");
}
String suffix = domainParts[1];
if (!suffix.equals("in") && !suffix.equals("com") && !suffix.equals("net") && !suffix.equals("biz")) {
    throw new DomainException("Invalid Domain");
}
if (email.startsWith(".") || email.startsWith("@") || email.endsWith(".") || email.endsWith("@")) {
    throw new DotException("Invalid Dot usage");
}
if (email.contains(..) || email.contains(@@)) {
    throw new DotException("Invalid Dot usage");
}
System.out.println("Valid email address");
} catch (DotException e) {
    System.out.println("DotException: " + e.getMessage());
    System.out.println("Invalid email address");
} catch (AtTheRateException e) {
    System.out.println("AtTheRateException: " + e.getMessage());
    System.out.println("Invalid email address");
} catch (DomainException e) {
    System.out.println("DomainException: " + e.getMessage());
    System.out.println("Invalid email address");
}
sc.close();
}
```

Status : Correct
